Work experience

Software Developer Intern at GoClick 01/2021– 04/2021

During my internship, I held the role of a Full Stack Developer, engaging with a comprehensive TechStack encompassing React Native for the Front-End, Spring Boot for the Back-End (API), MySQL for the Database, and AWS for API deployment.

My contributions involved the development of a mobile application tailored for a local supermarket, designed to facilitate online grocery shopping for clients during the Covid-19 pandemic.
This application allowed customers to place orders, opt for home delivery, or schedule in-store pickups at various branches of the supermarket. Payment options included online transactions through the integration of the Stripe API, as well as in-person payments via cash or card. This project, which I leveraged as my concluding endeavor for my Professional Course, garnered a commendable evaluation score of 18 out of 20.

Additionally, I played a vital role in an ongoing project akin to Uber Eats, focusing on Back-End development, Database implementation, and real-time tracking functionalities using Google Routes. These experiences showcase my expertise in software development.

Freelance 08/2021– 09/2021

As a freelance Software Developer, I successfully designed and developed a dynamic website for a car dealership. The system, built using CodeIgniter (PHP), MySQL, HTML, and CSS (Bootstrap), enabled the admin to effortlessly manage car listings by adding, updating, and removing vehicles. Concurrently, regular clients could conveniently view the entire range of cars available, accompanied by detailed information for each vehicle. This project demonstrated my proficiency in utilizing various technologies to create user-friendly and functional solutions.

Education

2022– 2025	**Bachelor degree in Software Engineering** Via University College, Denmark
2018– 2021	**Software Developer Certificate** Escola Profissional Cristóvão Colombo, Portugal
